Bivalent verb classes in Skolt Saami: A pilot study

Alena Blinova (Higher School of Economics, Moscow)
Ksenia Shagal (University of Helsinki)

SAALS 4, Uppsala University, 14–15 November 2019

Outline

- Background: a wide-scale project
- Data collection and annotation
- Bivalent classes in Skolt Saami
- Skolt Saami from a Uralic perspective
- Conclusions

Background

- A wide-scale project on bivalent verb classes in Eurasia (Say 2018; Say et al. 2018)
- Bivalent verbs are especially prone to show deviant valency behaviour (Bickel et al. 2014)
- 130 verb meanings given in context
 - ‘Peter ate an apple’
 - ‘Peter helped Mary’
 - ‘Peter fell in love with Mary’
 - ‘Peter is different from Michael’
- Primary data (questionnaires filled in by language experts)
- Family-specific study: Uralic languages → Saami languages

Language sample: Uralic

**12 languages from
7 subgroups:**

Saami

- Skolt Saami

Finnic

- Standard Finnish
- Ingrian Finnish
- Estonian

Mordvinic

- Erzya Mordvin
- Moksha Mordvin

Mari

- Hill Mari

Permic

- Komi-Zyrian
- Komi-Permyak
- Udmurt

Ugric

- Hungarian

Samoyedic

- Enets

Data collection

- Predicates
 - only predicates that can be expected to be bivalent
 - many predicates that are known to tend to deviate from the transitive prototype
- Translations
 - elicited from native speakers
 - annotated for argument coding devices (flagging and indexing) by language experts
 - variation in argument realization, synonyms etc. are disregarded: one pattern annotated for each predicate

Questionnaire

- 130 sentences

X-NOM + kã'dded + Y-ACC

<i>Peât</i>	<i>koo'dd-i</i>	<i>Mää'rij.</i>
Peter.SG.NOM	kill-PST.3SG	Maria.SG.ACC
'Peter killed Maria.'		

X-NOM + vaikkted + Y-ILL

<i>Ââ'kk</i>	<i>vaikat</i>	<i>mušt-t-u.</i>
age.SG.NOM	influence.PRS.3SG	memory-SG.ILL
'Age influences memory.'		

Data annotation

- **Transitivity**
 - one class of verbs is identified as transitive in each language
 - by definition, this is the class which encompasses verbs like 'break' and 'kill' (Haspelmath 2011)
 - morphosyntactic devices employed to signal transitivity vary cross-linguistically, e.g.
 - case frames (Skolt Saami)
 - differential object marking (Finnish)
 - optional object indexing (Mordvinic, Hungarian)

Data annotation

- **Transitivity ratio**

- the number of transitive verbs divided by the total number of verbs (Haspelmath 2015)
- transitivity ratio in Skolt Saami = 68 (transitive) / 125 (total) = 0.54

- **Transitivity profile**

- The set of verbs that are (in)transitive in individual languages
- for Skolt Saami:

'be afraid'	INTR
'throw'	TR
'have enough'	INTR
'resemble'	INTR
etc.	...

Data annotation

- **Valency classes**

- Valency classes: two verbs belong to the same valency class iff their two arguments are coded by identical devices respectively

<i>Peâtt</i>	<i>pââll</i>	<i>piânnj-est.</i>	
Peter.SG.NOM	fear.PRS.3SG	dog.SG.LOC	‘Peter is afraid of the dog.’
<i>Skääll</i>	<i>teâuddj-i</i>	<i>čää'33-est.</i>	
bucket.SG.NOM	fill-PST.3SG	water-SG.LOC	‘The bucket filled with water.’
<i>Peâtt</i>	<i>kuõsk-i</i>	<i>seinn-a.</i>	
Peter.SG.NOM	touch.PST.3SG	wall-SG.ILL	‘Peter touched the wall.’

- *põõllâd* ‘be afraid’ and *teâuddjed* ‘fill’ belong to the same valency class, while *kuõskkâd* ‘touch’ belongs to a different class

Bivalent verb classes in Uralic

- Uralic languages are more diverse in terms of their transitivity profiles than other language families in Northern Eurasia
- Uralic languages follow certain areal patterns with respect to both transitivity ratio and individual valency classes
 - Enets → other languages of Siberia
 - Hungarian → Standard Average European
 - Permic, Mordvinic and Mari → Slavic (Russian) and Altaic
 - Baltic Finnic languages on their own
- Language contact is an important factor in valency class organization in Uralic languages
- **Skolt Saami?**

1. Transitive

Number of predicates: 68

Encoding: X-NOM + predicate + Y-ACC

Examples:

<i>Peâtt</i>	<i>koo'dd-i</i>	<i>Mää'rij.</i>
Peter.SG.NOM	kill-PST.3SG	Maria.SG.ACC
'Peter killed Maria.'		

<i>Peâtt</i>	<i>kooll</i>	<i>musiikk.</i>
Peter.SG.NOM	hear.PRS.3SG	music.SG.ACC
'Peter hears the music.'		

2. Intransitive: NOM + GEN + postposition

Number of predicates: 18

Encoding: X-NOM + predicate + Y-GEN + postposition (*vuâkka, diõtt, tuâkka, rââst, ool, ârra, vuâstta, vuâlla*)

Examples:

<i>Peâtt</i>	<i>kuâđđj-i</i>	<i>Mää'rij</i>	<i>tuâkka.</i>
Peter.SG.NOM	remain-PST.3SG	Maria.SG.GEN	behind
'Peter fell behind Maria.'			

<i>Peâtt</i>	<i>õõmtõõžž-i</i>	<i>skiânk</i>	<i>diõtt.</i>
Peter.SG.NOM	be.surprised-PST.3SG	gift.SG.GEN	because.of
'Peter was surprised at the gift.'			

3. Intransitive: NOM + COM

Number of predicates: 9

Encoding: X-NOM + predicate + Y-COM

Examples:

Peâtt *teeivõõđ-i* *Mää'rja-in.*
Peter.SG.NOM encounter-PST.3SG Maria-SG.COM
'Peter encountered Maria.'

Peâtt *reeidčõõđ-i* *Mää'rja-in.*
Peter.SG.NOM have_a_quarrel-PST.3SG Maria-SG.COM
'Peter had a quarrel with Maria.'

4. Intransitive: NOM + ILL

Number of predicates: 8

Encoding: X-NOM + predicate + Y-ILL

Examples:

<i>Peâtt</i>	<i>la'ddj-i</i>	<i>ridd-u.</i>
Peter.SG.NOM	reach-PST.3SG	bank-SG.ILL
'Peter reached the bank.'		

<i>Peâtt</i>	<i>vastti-i</i>	<i>u'čteel-a.</i>
Peter.SG.NOM	answer-PST.3SG	teacher-SG.ILL
'Peter answered the teacher.'		

5. Intransitive: NOM + LOC

Number of predicates: 7

Encoding: X-NOM + predicate + Y-LOC

Examples:

Peâtt *pââll* *piânnj-est.*
Peter.SG.NOM fear.PRS.3SG dog-SG.LOC
'Peter is afraid of the dog.'

Peâtt *tu'kĕkad* *ĉee-st.*
Peter.SG.NOM like.PRS.3SG tea-SG.LOC
'Peter likes tea.'

6. Intransitive: LOC + NOM

Number of predicates: 5

Encoding: X-LOC + predicate + Y-NOM

Examples:

<i>Peâtt-ast</i>	<i>lij</i>	<i>vuei'vv-kõpp.</i>
Peter-SG.LOC	be.PRS.3SG	head-disease.SG.NOM

'Peter has a headache.'

<i>Åå'n</i>	<i>Peâtt-ast</i>	<i>lie</i>	<i>nokk</i>	<i>tie'ğğ.</i>
Now	Peter-SG.LOC	be.PRS.3PL	enough	money.PL.NOM

'Now Peter has enough money.'

7. Intransitive: NOM + NOM

Number of predicates: 1

Encoding: X-NOM + predicate + Y-NOM

Example:

<i>Tät</i>	<i>kopp</i>	<i>mähss</i>	<i>õhtt</i>	<i>eu'rr.</i>
PROX.SG.NOM	cup.SG.NOM	cost.PRS.3SG	one.NOM	Euro.NOM

'This cup costs 1 euro.'

8. Intransitive: NOM + *kolmâte* + NOM

Number of predicates: 2

Encoding: X-NOM + predicate + *kolmâte* + Y-NOM

Example:

<i>lj</i>	<i>muu</i>	<i>päi'dd</i>	<i>lij</i>	<i>jee'resnallšem</i>
NEG.3SG	1SG.GEN	shirt.SG.NOM	be.PRS.3SG	different

<i>ko</i>	<i>tuu</i>	<i>päi'dd.</i>
than	2SG.GEN	shirt.SG.NOM

'No, my shirt is different from yours.'

9. Intransitive: NOM + ESS

Number of predicates: 1

Encoding: X-NOM + predicate + Y-ESS

Example:

<i>Tät</i>	<i>tingg</i>	<i>kåáččeeet</i>	<i>kompass-ân.</i>
PROX.SG.NOM	thing.SG.NOM	be.called.PRS.3SG	compass-ESS

‘This tool is called a compass.’

10. Intransitive: LOC + GEN + postposition

Number of predicates: 1

Encoding: X-LOC + predicate + Y-GEN + postposition (*väjja*)

Example:

<i>Peâtt-ast</i>	<i>leäi</i>	<i>õõut</i>	<i>eeu'r</i>	<i>väjja.</i>
Peter-SG.LOC	be.PST.3SG	one.SG.GEN	euro.SG.GEN	short

'Peter was one euro short.'

NOM COM

- A fairly uniform class of across Uralic languages
 - ‘encounter’, ‘fight’, ‘be friends’, ‘get to know’, ‘speak’, ‘agree’, ‘have a quarrel’, ‘mix’
- Different coding devices
 - Skolt Saami, Komi: NOM COM
 - Udmurt, Hungarian: NOM INS
 - Enets: NOM LOC
 - Mordvinic: NOM NOM *marto/mar̥tə*
 - Hill Mari: NOM NOM *dono*
 - Finnish: NOM GEN *kanssa*

LOC NOM

- 5 predicates
 - ‘feel pain, have a Y-ache’
 - ‘have a Y (illness)’
 - ‘suffice, have enough Y’
 - ‘have Y’
 - ‘remain’+ ‘be short of Y’: LOC GEN *väjja*

- **GEN NOM** encoding in most Uralic languages, e.g. in Udmurt:

<i>Petâ-lèn</i>	<i>mašina-ez</i>	<i>van’</i>
Petja-GEN	car.NOM-POSS.3SG	COP.PRS

‘Petja has a car.’

LOC NOM

- **LOC NOM** is Skolt Saami

Peâtt-ast *lij* *nuõpp-kõpp.*
Petja-LOC be.PRS.3SG cold(disease)-disease.NOM
P. has the flu.

- **ADE NOM** in Standard Finnish

Peka-lla *on* *flunssa.*
Pekka-ADE be.PRS.3SG flu.NOM
P. has the flu.

~ Russian

Transitive verbs

- Transitive in all Uralic languages
 - ‘take’, ‘eat’, ‘make’, ‘break’, ‘put on’, ‘lose’, ...
- Intransitive in most Uralic; NOM PART in (some) Finnic
 - ‘govern’, ‘miss’, ‘follow’, ‘help’, ‘need’, ‘flatter’, ‘avoid’, ‘envy’, ...
- Intransitive in other Uralic and in other neighbouring languages
 - ‘believe’, ‘trust’, ?

Conclusions and further prospects

- Skolt Saami
 - similar to other Uralic languages (NOM COM)
 - similar to Finnic languages and Russian (LOC NOM)
 - parallel to Finnic: NOM PART > NOM ACC (transitive)
 - exceptional pattern (transitive 'believe' & 'trust')
- Other Saami varieties:
 - North Saami, Kildin Saami (coming soon)
 - others?
